QA · MANUAL VERIFICATION

What to test on the website

1 · Creating a remaining balance, per item type

- Add a guest via Change People on an already-paid booking — confirm it appears as a pending remaining-balance item, not charged immediately.
- Attach an add-on mid-stay — confirm it lands on the same pending link as any other open item, not a separate charge.
- Apply an Edit Discount adjustment that leaves a balance due — confirm it becomes a link item.
- Raise a Custom Charge — confirm it joins existing pending items on one combined link.
- Switch Package to a higher-priced package — confirm the price delta lands on the link instead of charging immediately.
- Pay the link with all five item types combined on one booking — confirm every item marks Paid and the link itself flips to Paid.
- Instead of paying through the link itself, settle the same outstanding balance from the Make Payment option — confirm it collects the correct amount and marks the pending items Paid the same way as paying via the link.

2 · Parity across Admin / Tour Operator / Affiliate

- Repeat every step in Section 1 from Admin, Tour Operator, and Affiliate logins — confirm identical behavior and that the pending-items list matches from each.
- Pay a link on an Affiliate-sold booking ("Pay with Link") — confirm it settles correctly and the affiliate's own booking view reflects the paid status.

3 · Cancelling or voiding before payment

- Add a guest via Change People, then delete that same guest before the link is paid — confirm the pending item is voided, not left dangling.
- Add an add-on, then remove it before paying — confirm the pending add-on item is cancelled, both for a single item and for a whole-booking cleanup.
- Cancel or refund a booking that has an outstanding remaining-payment link — confirm it voids the pending items rather than trying to refund money that was never collected.
- Perform a Change People swap that nets to $0 — confirm no payment link is created at all.

4 · Reporting & Dashboard correctness

- With an unpaid change-people addition pending, check the Dashboard tourist count and revenue do not include that pax until its link is paid.
- Check the Payment Breakdown Report and the Geographic & Tax Collection Report exclude the same unpaid pax.
- Pay the pending link, then re-check the same reports/dashboard update to include the now-paid pax.
- Check permit-fee and cost totals on a booking with a mix of paid and still-unpaid pax.

5 · Extend Booking & Split Booking

- Extend a pay-later booking that has unpaid pending items — confirm it accounts for them correctly.
- Split a booking that has an unpaid pax (added via Change People) into two bookings — confirm the unpaid pax's data is apportioned to the correct split. This is the one change still in progress — verify it live before merging.

6 · Webhook, expiry & email

- Trigger a duplicate Stripe webhook event for the same payment link — confirm it does not double-settle any item (idempotency).
- Let a remaining-payment link sit unpaid past its expiry window — confirm it flips to Expired and is handled correctly if the guest returns to it afterward.
- Resend a remaining-payment link — confirm the previous unpaid link is cancelled, the new one has a unique token, and the email actually sent to the guest shows the correct amount and item list.

7 · Front-end / UI pass

- On the booking page, confirm the pending-balance list renders correct labels, amounts, and "created by" attribution for every item type, including items created by different roles.
- Confirm the checkout/payment button correctly opens the combined-balance payment link rather than a per-item charge, on every screen that can create a pending item.
- Check the invoice/print view reflects paid vs. still-unpaid items accurately.
- Spot-check on a mobile viewport width, since none of the above is exercised by an automated test.
